

Teacher Story: Karin Lebo

When I first saw my GoMath materials I was excited but as I opened it up to use it with my first and second grade classroom I quickly became overwhelmed by the changes. But as I have come to understand what NAD Math standards really mean I was able to see the pattern the textbooks were using. This is not a series that allowed me to just pick up the textbook and run with it. I have had to spend much more time learning the structure and sequencing of GoMath than any other series I have used. I have seen how Go Math helps my students gain the vocabulary and confidence to talk about math and how they are thinking as they work through problems to find the solution. As I was able to take the time to really get to know the books I have grown to really appreciate the depth of knowledge my students are developing.
