

Teacher Story: Tania Miller

Go Math! has really improved the quality of my math program because it allows my students to see math in a deeper way. In using this program, my students now have a greater understanding of math- they know why they need to complete a problem in a certain way, not just how to complete it. They are also shown several different ways to complete a problem, which has helped reach all different types of learners, and in turn, improved the quality of the students' knowledge of math.

Big Ideas Math has particularly helped my students gain a greater knowledge of math because it breaks down the problems simply for the students and provides examples to help the students understand fully what they are trying to learn. Also, it is designed so the students spend two days on the learning topic, which gave my students time to grow and expand on the topic. As a teacher, you have access to the assessments, and can edit tests, quizzes and the record and practice journal. Overall, an excellent program for the teacher and students!
